important cellular mechanism for targeting abnor mal or short-lived proteins for degradation. Ubiq uitination involves at least three classes of enzy mes: ubiquitin-activating enzymes, ubiquitin-conju gating enzymes, and ubiquitin-protein ligases. Thi s gene encodes a member of the E2 ubiquitin-c onjugating enzyme family. The encoded protein i s required for the destruction of mitotic cyclins a nd for cell cycle progression, and may be involv ed in cancer progression. Multiple transcript varia nts encoding different isoforms have been found for this gene. Pseudogenes of this gene have be
